

Axial Seal Air Element End Cap Changes

Old Style

New Style Both Ends

New Style One End

This is to alert you to changes on certain Axial Seal air filters. A recent project replaces the steel end caps on several of our axial seal filters with urethane. The benefits of this change include the use of environmentally friendly materials, eliminating gasket adhesion concerns, superior gasket sealing properties, and an improved appearance. The first of these products to receive the new technology will be the AF2027. Due to some unique end caps, not all products will receive changes to both ends. Attached is a list of products with estimated implementation dates. Please note that these dates are estimated due to varying amounts of use up of existing stock. This list is not complete, and any axial seal air filter with steel end caps could potentially receive these improvements going forward.

Part #	Implementation Date
AF2027	8/18/09
AF108	9/15/09
AF511	9/21/09
AF594	9/21/09
AF2087	10/01/09
AF686	10/07/09
AF218	10/14/09
AF2007	10/15/09
